**E**vent Triggered Video Radar (ETVR): Designed for private-party use in industrial, commercial and community applications, RU2 Systems now offers an economical means of photo-documenting speed violations. Now industrial and educational facilities, military bases, private communities and the like can address, with documentation, speed violations within their ranks.

**B**ased on approach-only radar in conjunction with a Doppler presence sensor, the system records the rear license plate and general impression of any vehicle exceeding a given speed. This threshold is set in 1 MPH increments at time of deployment. Operating day or night thanks to an IR sensitive camera, the captured video image is superimposed with a time/date stamp and the offender's speed. The picture is then stored on a SecureDigital card for review and comparison to a list of known vehicles. Unlike constant-on video systems, only those vehicles in violation are recorded, ending the tedious chore of reviewing endless tape after tape. Dependent on desired resolution, hundreds of images can be stored on one card. Images can be offloaded to CD or other media for long-term storage.
